

Forecast Accuracy: RIVE vs. Benchmark Models

DM: Diebold-Mariano (1995) with Newey-West HAC. *** $p < 0.001$. Test: 2023-2024 | 55 tickers | $N = 27,507$.
GARCH bars truncated at -20% (actual values shown). Negative R^2 reflects conditional- vs. realized-variance target mismatch.
